Forecast for Monday 11 Apr 2022

Weather: Cloudy and windy during the early hours with strong and gusty winds, reaching gale force on many summits. Remaining very windy and largely cloudy during the morning, but bright at times with some hazy sunshine. A band of showers will progress northwards across the park through the second half of the morning, these possibly briefly heavy in places. Winds very gradually easing during the afternoon with occasional bright or sunny spells developing. Staying largely dry into the evening.

Chance of cloud-free hill tops above 600m: 90% becoming 70% by the evening.

Low cloud and visibility: Cloud bases well above all summits for most of the day. Patches of cloud forming on summits above 800m in association with showers and perhaps more generally by the evening. Generally very good visibilities, however briefly moderate as showers pass through and locally poor in any cloud later.

**Level above which ground is expected to be frozen/snow is expected to settle.*

Meteorologist's View

Despite some valleys having relatively calm winds at first, the summits will have very strong winds with gusts of over 60 mph possible on the highest summits. Strong and gusty winds will develop widely during the morning but there will continue to be variations with occasional lulls and then sudden buffeting on exposed ridges and cols. This will give difficult walking conditions as well as a significant wind chill over the tops.

Recent rainfall: measured at Neuadd: altitude 353m

14:00 on Sun 10 Apr 2022	0mm	0.4mm	1.8mm

Forecast for Tuesday 12 Apr 2022

Weather: Periods of rain, heavy at times, spreading northwards during the early hours and lasting into the morning. A risk of thunder and lightning in the heavier bursts. Becoming drier by the end of the morning, with bright or sunny intervals developing, but a continuing chance of a few sharp showers, these lasting into the evening.

Maximum wind: South-easterly 15-20 mph gusting 25-30 mph, becoming south-westerly 15-20 mph gusting 30 mph.

Chance of cloud-free hill tops above 600m: 20% becoming 60% through the afternoon.

Low cloud and visibility: Areas of cloud developing above 500m during the early hours, this possibly quite extensive and persistent through the morning but occasional breaks especially in the area around Brecon. Ragged fragments of cloud forming on slopes as low as 350m during periods of rain. Bases generally lifting to 600-800m during the afternoon. Very poor visibilities in the cloud with navigational challenges, especially away from the main paths. Even lower lying areas will have poor visibility of just 2-4 kilometres at times during the morning rain. Most valleys seeing moderate to good visibilities at times during the afternoon.

Temperature: **Valleys:** Plus 7 Celsius rising to plus 15 Celsius.
At 600m: Ranging from plus 6 Celsius to plus 9 Celsius.
Freezing level: Well above the summits.
